

## Tricks and Tips in the event of a power outage

### Before the power outage

- Unplug your devices from the mains (IT, multimedia, entertainment devices, telephones, etc.).
- Open your electric garage door in advance.
- Do not use the lift shortly before the planned power outage. Alternatively, block access to the lift before the power outage.
- Unplug any devices that generate energy, such as generators or solar panels.
- Inform older residents and children about the power outage.

### During the power outage

- Switch off stoves, irons, drills, circular saws, vacuum cleaners, modems, sound systems, PCs, TVs etc. These devices will automatically switch on when the electricity is turned back on.
- Lamps can remain switched on and there should be no issues when the power is turned back on.
- To prevent cold escaping from the fridge or freezer, avoid opening these during the power outage.
- The landline works for a maximum of four hours without electricity. Devices that connect to the mains power supply will not work.

### After the electricity is turned back on

- Please check your settings for aquariums, clocks, radio alarm clocks, telephones, heating, fridge/freezers, ovens etc.; these may need to be reprogrammed.
